On mysql workbench, click on the "+" sign to add database.
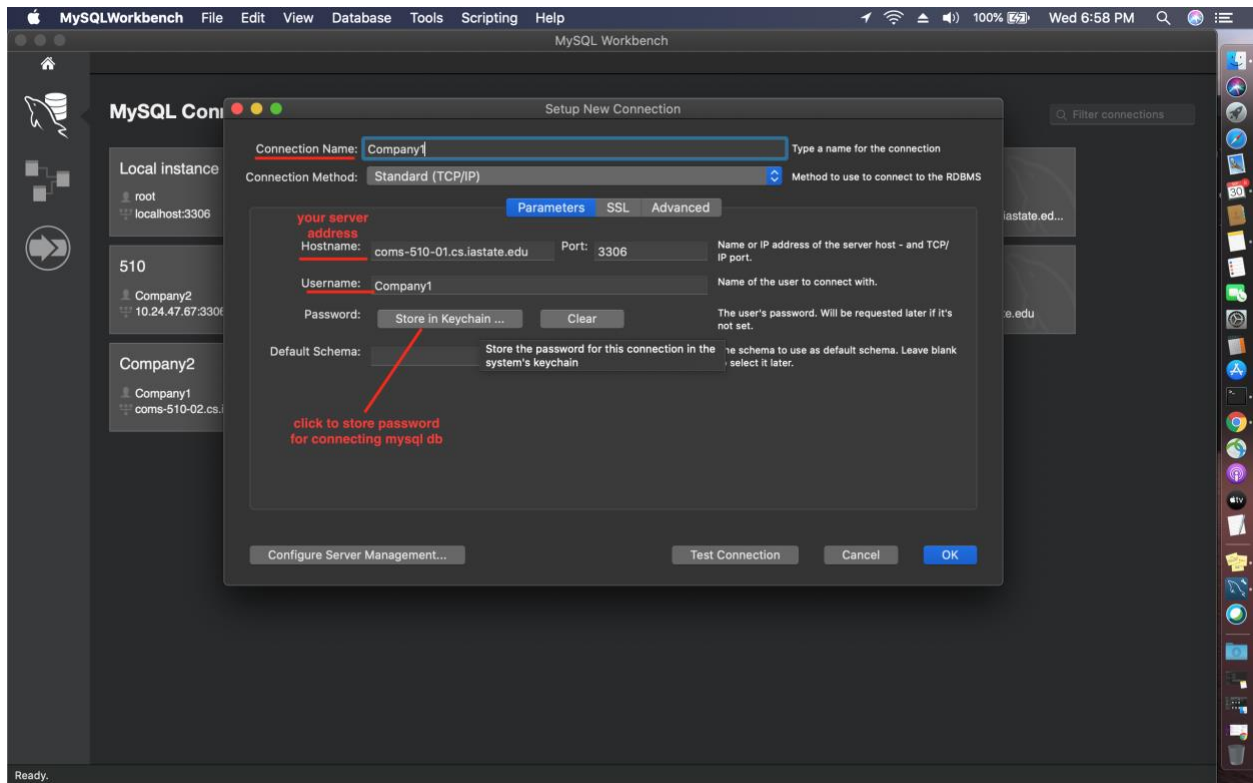

Give:

connection name = some name

Hostname = your server address where mysql is installed

Username and password can be found on the server at the root directory("/")

cd / and press enter and then look for file "mysql-pw.txt" which has mysql db connection
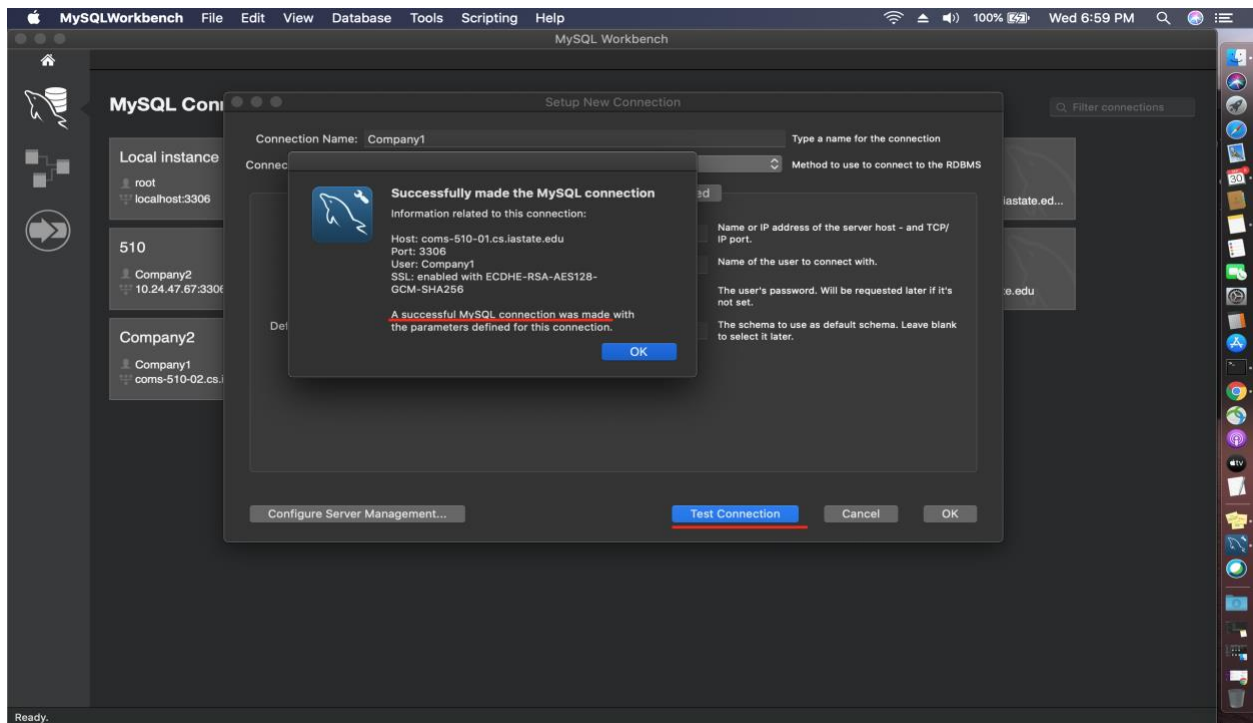

information.

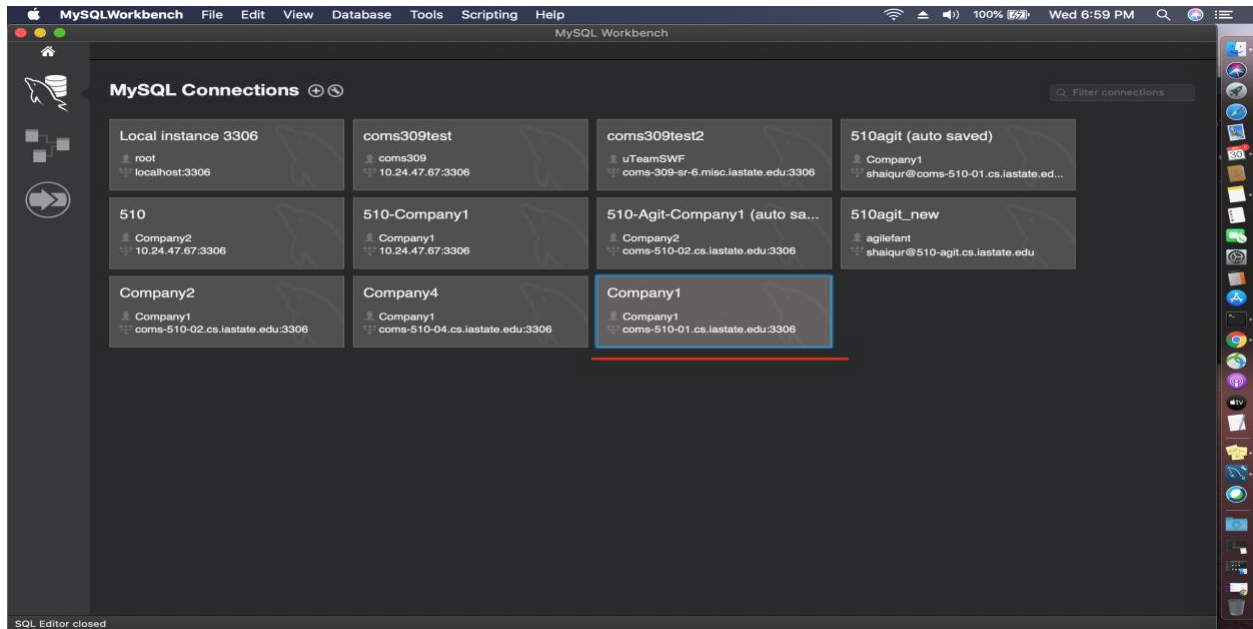

For entering password click as shown above.

Enter the password as mentioned in the file(mysql-pw.txt).

Then click ok and Test the connection . You should see a successful message.

Click on the newly created instance.

View tables and schemas and data.
